- o A Full Stack Developer. I have expertise in both front-end and back-end web development, allowing me to design and build complete web applications. I work with languages like HTML, Dart, Java, CSS, JavaScript, and frameworks like React for the front end, as well as Python, or Firebase for the back end. I love combining my technical skills with creativity to create efficient and user-friendly web solutions.

SKILLS

React	Dart	Java	HTML	Git
Next.js	JavaScript	Python	CSS	

PROFESSIONAL EXPERIENCE

National Service Scheme Secretariate • Ghana (Service)
Present

11/2022 -

Assisting IT professionals in various projects, such as system upgrades, software migrations, or implementing new technologies, by conducting research, testing, and providing general support.

- o Software Installation and Updates: Assisting with the installation, configuration, and updates of software applications used by the company, ensuring proper licensing and compatibility.
- o Reduced development time by developing customizable, reusable, and dynamic UI components that other developers could easily leverage. Also, it ensured that other developers could easily customize and adapt the components.
- o Solved complex problems with creativity by learning and adapting to unique technologies to craft solutions that meet the company's ever-changing needs.

NCR Ghana Limited, Intern • Ghana (Full Time)

06/2023 – 07/2023

I Assisted the IT professionals in various projects, such as system upgrades, software migrations, or implementing new technologies, by conducting research, testing, and providing general support.

- o I assisted in the installation and maintenance of software and updated the software used by various departments.
- o I was assigned tasks such as preparing reports, creating presentations, and collecting data on market research.

Web App Developer • *Freelance*

Leveraged my expertise in web app Development to deliver tailored solutions that align with business objectives.

- **DMS**

12/2022 – 05/2023

[Live Site](#) •

Developed an online document management system that allows users to send and receive documents in a work environment. This was done to reduce the movement between offices when sending documents to other employees. I used Dart and Flutter for the front end and used firebase as the back end.

Mobile App Developer • *Freelance*

- **Rapid Response**

12/2022 – 05/2023

[GitHub](#)

I developed a mobile application using Dart and Flutter for the front end, which enables users to report fire emergencies and request fire services based on their location. The backend was built using Firebase.
